Outpatient interventions

Outpatient interventions

On the day before the hospital stay

One day before the planned intervention, a nurse from the surgical outpatient clinic will contact you between 2 and 3.30 pm. If you cannot be reached, we ask you to call the surgical outpatient clinic yourself (tel. +41 44 266 72 70). In this telephone conversation you will find out about your child's date of admission. Unfortunately, due to organisational reasons we are not able to inform you about this earlier. How long your child may eat or drink before the intervention will also be discussed. There is also a possibility to clarify still unresolved questions.

We wish you and your child a pleasant stay!

Before leaving the hospital

Provided that no anomalies arise, your child will have recovered from the anaesthesia and the operation and can leave the hospital after the intervention. For a safe trip home we recommend a suitable means of transport (private car/taxi). Public means of transport are not particularly suitable for larger children.

After the hospital stay

To whom you can turn to at home if you have questions regarding your child's well-being will already be discussed with you personally during the stay.
