

Solid Biosafety Waste

Solid waste disposal BSL 1 and BSL 2

- Solid biosafety waste from the laboratories (diagnostics and research) needs to be disposed in **two** bio-hazard bags held in the red bins. Red bins are used as holder of waste bags and must NOT be closed with the yellow lid, but re-used as holders.
- The bag has to have the biohazard sign on it.
- The bag should not contain liquids (risk of leakage)
- If the bag is $\frac{3}{4}$ full close it with autoclaving tape. **NOT too tight**. Label the bag with your group name.
- Bring it with the trolley to the disposal room in V-floor (LLF.V+6.014) and leave the waste bags.
- Bring the red bin back to the lab and re-use it.

▲ Caution: Use two bags to avoid any leakage

Such containers marked with the biosafety symbol are available on **FLOOR V, ROOM 6.014** (LLF.V+6.014)
