

Mixed waste disposal

- Mixed biosafety waste like agar or LB petri dishes from the laboratories needs to be disposed in **two** red bags held in the red bins.
- The bag has to have the biohazard sign on it.
- If the bag is $\frac{3}{4}$ full close it with autoclaving tape. NOT too tight. Label the bag with your group name.
- Bring it with the trolley to the disposal room in V-floor (LLF.V+6.014)
- Bring back the red bin to the lab of origin and reuse it as waste bag holder.

▲ Caution: Use two bags to avoid any leakage
